

User's Guide For SOG Aegis™

Congratulations on becoming a SOG Aegis owner. You have chosen a truly innovative product with S.A.T.™ (SOG Assisted Technology). Once you start to open the knife, a spring helps to fully open the blade. Please read this short manual to properly operate your Aegis knife.

Aegis Fact:

Unlike switchblades, which are activated by a button-like mechanism in the handle or with the use of gravity, S.A.T.™ only works when you start to manually open the blade out of the handle. When the blade is closed, it is held securely inside the handle.

Instructions

1. The safety on the Aegis is on the side of the handle, towards the back of the knife. It is designed to give extra protection against accidental blade opening when carried (in your pocket, for example). To open the blade, make sure the safety is down. It is now ready to open. When you want to keep the blade locked within the handle, just push the button up to engage the safety. When the safety is on the button will show green.

2. It is best to change the reversible clip to the opposite side from which your thumb will be opening the blade. This will give your fingers a little better hold on the handle.

3. Start to open the blade and feel S.A.T.™ take over. It might take a little practice to get comfortable with the grasping and opening of your new knife. Note that if the blade is not opening fully, you might be holding your thumb on the thumb stud too long or be blocking the opening blade with one of your other fingers. It is best to push the blade open with your thumb behind the thumb stud... not on top of it.

NOTE: FOR YOUR SAFETY, IT IS IMPORTANT THAT YOU KEEP YOUR OTHER HAND AWAY FROM THE BLADE WHILE OPENING.

4. To close the blade on the Aegies, pull back the button on the Arc-Actuator and rotate the blade closed with two hands (although with practice you may be able to close it with one hand). The blade is now held securely inside the handle. If you want extra security, just push the safety to the locked position.

NOTE: ALWAYS BE SURE TO KEEP YOUR FINGERS CLEAR WHEN CLOSING ANY KNIFE BLADE.

Specifications

Aegis

Blade 3.5" • Handle: 4.75"
Weight: 3.1 oz. • AUS 8 Stainless Steel
